lethal autonomous weapons are weapon systems that can select and destroy targets without intervention by a human operator fighting machines explores the relationship between lethal autonomous weapons laws the concept of human dignity and international law much of this analysis speaks to three fundamental and related problems when a laws takes a human life is that killing a violation of human dignity can states and non state actors use laws in accordance with international law and are there certain responsibilities of human decision making during wartime that we should not delegate to machines in the book dan saxon argues that the use of laws to take human life constitutes a violation of human dignity rather than concentrating on the victims of the use of lethal force saxon instead focuses on the technology and relevant legal principles and rules to advance several propositions first as laws operate at increasingly greater speeds their use will undermine the opportunities for and the value of human reasoning and judgment second by transferring responsibility for reasoning and judgment about the use of lethal force to computer software the use of laws violates the dignity of the soldiers commanders and law enforcement officers who historically have made such decisions and therefore breaches international law third weapon designs that facilitate teamwork between humans and autonomous systems are necessary to ensure that humans and laws can operate interdependently so that individuals can fulfil their obligations under international law including the preservation of their own dignity and ensure that human reasoning and judgment are available for cognitive functions better suited to humans than machines fighting machines speaks to the fields of international humanitarian law human rights criminal law and legal philosophy it will also be of interest to non lawyers especially military officers government policy makers political scientists and international relations scholars as well as roboticists and ethicists

this book gathers together recent international research in intellectual disability id examining the diverse modes of existence that characterise living with intellectual disabilities in the 21st century ranging from people with no speech and little mobility who need 24 hour care to people who marry or hold down jobs this book moves beyond the typical person with id imagined by public policy healthy with mild id and a supportive family and living in a welcoming community the book is divided into three sections the first a richer picture of people and relationships expands our understanding of different people and lifestyles associated with id the second section where current policies fall short finds that supported living provides just as mediocre a form of care as group homes and concludes that services for people with challenging behaviour are unrelated to need the contributors research identifies no effective employment support strategies as well as technological and legal changes that prevent organisations from employing people with id with nearly a quarter of this population in poor health the contributors reflect on whether social model approaches should be allowed to trump medical considerations the third section new thinking about well being reveals that being old poor and living alone increases health risk and that medication administration is significantly more complex for people with id moving beyond 20th century certainties surrounding intellectual disability this book will be of interest to those studying contemporary issues facing those living with id as well as those studying public health policy more widely the chapters in this book were originally published in issues of the journal of intellectual developmental disability
