this book is an extraordinary achievement by jonathan halevy to condense the material of three major gastrointestinal textbooks would be triumph

enough but to add a distillate of the contents of ten journals from 1980 to 1985 requires herculean vigor to reorganize all the material under headings which extract concise facts from wheat and chaff requires a passionate interest in patients together with an understanding of physiology fortunately jonathan halevy has just the right combination of clinical and laboratory interest for him to select the details of what is important such compulsive dedication has now made it possible for the practicing physician gastroenterologist or house officer interested in preparing for board examinations or simply browsing in the field to have at his fingertips a series of definitions and to put in his pocket the key facts for diagnosis and therapy of course facts by themselves are something of which to be a little wary scientists first doctors regard facts the way farmers look at sheep to be sheared for their utility medicine too often is only a fact gathering occupation some lectures send me to wool gathering in which having the facts sometimes clouds clinical judgment about what is important for the individual patient vii viii foreword tionalism and romanticism lie at the two poles of medical practice but rationalism rules in the 1980s
