Alphabetical Index of Occupations and Industries 1940

based on the results of research in physical asset management maintenance replacement and reliability theory and applications introduces students to the tools for making data driven decisions and how to use them the book offers a solid theoretical foundation for these tools demonstrating applications through various case studies firmly rooted in reality the applications covered relate to areas such as food processing the military mining transportation steel and petrochemical and pharmaceutical industries ideal for classroom use this text features supplementary software that can be downloaded from the crc site the downloadable educational versions of software packages include orest sms exakt for cbm optimization perdec workshop simulator crew size optimizer and wiebullsoft this book can be used as a textbook for a one semester senior undergraduate or postgraduate course on maintenance decision analysis it provides problem sets with answers at the end of each chapter an extensive set of powerpoint slides covering the various chapters and appendices a solutions manual for the problems in the book and a bank of more than 100 examination questions instructors who adopt the book can obtain these resources at crcpress.com the authors approach the topic with the ideology that mathematical modeling is not a spectator sport their examination of the underpinning theories for formulating models and exploration of real world applications make the book both informative and practical it provides professors with the tools they need to easily teach their students how to transform data into information

Design of TVA Projects: Mechanical design of hydro plants 1952

an examination of fifteen numerically controlled lathe programming systems was conducted to characterize them qualitatively and quantitatively the report presents a description of each of the fifteen voluntary participants systems the report describes the non technical characteristics of each system the business and operational characteristics such as hardware and software sources and costs documentation training vendor support and maintenance tabulates the capabilities of the languages for description of the geometrical configurations of the part being programmed and the variety of the geometrical formats accepted by each system as manuscript statements discusses the use of macros to simplify the writing of programs to perform the common operations of all lathe work automatic roughing finishing along a profile threading grooving and necking drilling boring reaming and tapping presents a brief discussion of the distinguishing characteristics of each system describes the preparation of ten test parts for use in demonstrating the capabilities of the fifteen systems describes the capabilities demonstrated by the fifteen systems to program the ten test parts the amount of time required to write the program and to debug it it shows the success in processing and postprocessing the program and the verification of the output tape
