Inventory of Approved and Projected Programs 1999 the material basis of energy transitions explores the intersection between critical raw material provision and the energy system. chapters draw on examples and case studies involving energy technologies, e.g. electric power, transport and raw material provision, e.g. mining, recycling, and consider these in their regional and global contexts. the book critically discusses issues such as the notion of criticality in the context of a circular economy, approaches for estimating the need for raw materials, certification schemes for raw materials, the role of consumers and the impact of renewable energy development on resource conflicts. each chapter deals with a specific issue that characterizes the interdependency between critical raw materials and renewable energies by examining case studies from a particular conceptual perspective. the book is a resource for students and researchers from the social sciences, natural sciences and engineering, as well as interdisciplinary scholars interested in the field of renewable energies, the circular economy, recycling, transport and mining. the book is also of interest to policymakers in the fields of renewable energy, recycling and mining, professionals from the energy and resource industries, as well as energy experts and consultants.
