Applied Natural Language Processing 2012 this book provides a comprehensive account of the role of recursion in language in two

distinct but interconnected ways first david j lobina examines how recursion applies at different levels within a full description of natural language specifically he identifies and evaluates recursion as a central property of the computational system underlying the faculty of language b a possible feature of the derivations yielded by this computational system c a global characteristic of the structures generated by the language faculty and d a probable factor in the parsing operations employed during the processing of recursive structures second the volume orders these different levels into a tripartite explanatory framework according to this framework the investigation of any particular cognitive domain must begin by first outlining what sort of mechanical procedure underlies the relevant capacity including what sort of structures it generates only then the author argues can we properly investigate its implementation both at the level of abstract computations typical of competence level analyses and at the level of the real time processing of behaviour

Recursion 2017-07-21 this book shows ways of augmenting the capabilities of natural language processing nlp systems by means of cognitive mode language processing the authors employ eye tracking technology to record and analyze shallow cognitive information in the form of gaze patterns of readers annotators who perform language processing tasks the insights gained from such measures are subsequently translated into systems that help us 1 assess the actual cognitive load in text annotation with resulting increase in human text annotation efficiency and 2 extract cognitive features that when added to traditional features can improve the accuracy of text classifiers in sum the authors work successfully demonstrates that cognitive information gleaned from human eye movement data can benefit modern nlp currently available natural language processing nlp systems are weak ai systems they seek to capture the functionality of human language processing without worrying about how this processing is realized in human beings hardware in other words these systems are oblivious to the actual cognitive processes involved in human language processing this ignorance however is not bliss the accuracy figures of all non toy nlp systems saturate beyond a certain point making it abundantly clear that something different should be done
